

## **AMENDMENTS TO THE SPECIFICATION**

On Page 9, after Paragraph [0026] and before Paragraph [0027], please add the following paragraphs:

Referring to Figure 2a, the personal computer 22 includes an indexer 15, a storage medium or memory 23, a browser screen 72, and a display unit 88. The digitizer 13 is in communication with the indexer 15. The indexer 15 is in turn in communication with the storage or memory device 23. The storage/memory device 23 is in communication with the plotter 86 and the browser screen 72. The browser screen 72 is also in communication with the display unit 88.

The panel 12 is configured for temporary display of user-drawn marks. For example, the panel 12 may comprise a whiteboard panel for use with temporary markers that dispense erasable ink. The digitizer 13, such as a scanner unit, is configured for generating digital information. The scanner unit 13 scans whiteboard notes from the whiteboard panel 12. The indexer 15 is configured to associate the digital information with a header. The header is based at least in part on a selected portion of the user-drawn marks selected by the user such that the selected portion of the user marks correspond to a circle region of the whiteboard notes. The indexer 15 also sends the digital information to the memory for storing and retrieval. Additionally, the indexer 15 uses an indexing method that will be further discussed later.

On Page 5, after Paragraph [0014] and before Paragraph [0015], please add the following paragraph:

Figure 2a is a block diagram of the whiteboard apparatus of the present disclosure.
